3. General guidance for businesses

Inspection, testing and maintenance are different tasks. The appropriate service and frequency depend on the equipment, its use, manufacturer instructions and applicable requirements. Do not assume that a single annual visit covers every required task.

Identify the work. Provide the property address, system type and manufacturer, prior reports, and any deficiency notice. Request service for each applicable system, including any tests or maintenance that occur less often than the routine visit.

Verify qualifications. Check the company's current credentials, appropriate license scope, insurance and the qualifications of the person doing the work. Sprinkler inspection credentials do not necessarily authorize every repair, installation or specialized test. Confirm any manufacturer-specific qualifications needed for your equipment.

Compare written scopes. Ask what the price includes: inspection, testing, maintenance, reporting, tags, travel, after-hours charges and subcontracted work. Request separate authorization and pricing for repairs. A low inspection price may not include deficiency correction.

Treat kitchen work as separate services. Hood, duct and exhaust cleaning does not replace inspection and maintenance of the kitchen fire-suppression system. The portable Class K extinguisher is also a separate service item. Confirm who handles each task and documents the appropriate schedule.

Keep the records. Retain inspection and test reports, service records, deficiency notices and proof of corrective work with the building records. Ask the local fire authority whether reports must be submitted and who is responsible for submitting them.

Address problems promptly. Ask the contractor to explain failed tests, impairments and needed repairs. Coordinate out-of-service conditions with the contractor and local fire authority. Call 911 for an emergency.

4. Public credential-checking resources

Washington Department of Labor & Industries: [Verify a Contractor, Tradesperson or Business](#)

Use the state lookup for registration, licensing and related information. Website: secure.lni.wa.gov/verify/

Washington State Fire Marshal's Office: [Fire Sprinklers](#)

Check current sprinkler contractor licenses, certificate holders and license scope. Website: wsp.wa.gov/fire-sprinklers/

Washington Department of Health: [Backflow Assembly Tester resources](#)

Use the BAT Certification Verification and BAT Public List links. Website: doh.wa.gov; search "backflow assembly tester."

Resource descriptions are based on the agencies' public websites. These links are starting points for verification, not confirmation that a listed contractor is qualified for a particular job.
